Abstract — In line with the development of computer and information technology, interactive learning become an alternative choice to the conventional one. MM*Indo is an interactive introductory to the world of statistics using Indonesian Language. This software would help the student to understand the statistic lectures, especially in the elementary phase, through it's dynamic explanation and many practical exercises. The software is supported by the XploRe statistical programming language and written in HTML and Javascript, so that it can be executed via World Wide Web and also CD-ROM. It consists of 12 chapter covering all introductory temas of statistics, from the descriptive statistics, introduction to the probability, hypothesis testing until linear regression.
