Abstracts

Many methods for estimation level of Life Table. One of is Trussel Method. This method can be used for open population. If no migration effect it can be used in close population too. It based on death probability value at age x , as $Q(x) = k(i) D(i)$, where: $k(i) = a(i) + b(i) P(1)/P(2) + c(i) P(2)/P(3)$, $a(i)$, $b(i)$ and $c(i)$ multiplier of Trussel, $D(i)$ is proportion of children dead by women in age group i and $P(i)$ is average of parity per women in age group i . In this paper will estimate level of Life Table of West Java and Banten with assumption open and closed population.

Keywords: Life Table, Trussel Method, ASNMR
